

SAITAMA INU

BEP20

Token WhitePaper
Version 1.0

<https://saitamainumillionaire.com>

Introduction

Congratulation and welcome to the world of SAITAMA. As an early investor, we can tell you that you're a potential investor, and you are joining one of the most exciting new DeFi project we're launching on the Binance Smart Chain (BSC). As you know , The ERC20 token is already on the market. The SAITAMA INU BEP20 is not a meme token or joke. This is a fruit of a long term research and ambition of lunching a powerful and successful BSC project. The Goal is to maximize investor returns, community engagement and token utility. Driven by data, informed by insight, we seek to bring innovation into everything we do. We learned, analyzed, and we finally lunch the BEP20 version of SAITAMA. If you have something to think about, we will suggest you thank yourself for being part of this project.

The Opportunity

The world is becoming bigger, we're evolving but at the same time, living become more complicated. Young people are suffering all over the World, especially in some third-part countries. As we know that the blockchain technologies is evolving and can change everything. We've seen that the World where Young people can have access to the finance management, it will be easy to live. Reduce the pain and financial insufficiency is one of are main goal. So being part of the SAITAMA INU BEP20 Token is a luck.

Now you know the Goal. But to make every thing easy, those people will need to understand how money works, and that is neither taught at home nor at school. 93% of the Gen Z say they feel confused or frustrated when the subject is finance. With debts to pay, lifetime goals and dreams to achieve, they must attain financial wellbeing and become comfortable with money and their economic status.

There is where SAITAMA comes in, providing content that teaches them how money works while they invest, opening opportunities for wealth creation. Our goal is to foster human connection through financial literacy, filling this gap in the crypto and financial market and preparing the next generation of investors.

Origins

Obsessed by that vision, we launched SAITAMA (\$SAITAMA) based on Binance Smart Chain (BEP20) in November 2021. As a community of believers, we started to take crypto enthusiasts joined together.

After a couple of week of work, the community start growing, and we're happy to see what we're doing today to help the world and when we think about what will be done, it is just a mind blowing.

Community

We have one of the best Community on the Market and our pledge to our community is not simply a common catchphrase, rather it's the underlying value that shapes every decision that we make. Our community of investors deserve a project where they know they have the best and brightest minds working together to achieve financial freedom and success. Through an elastic supply mechanism to dynamically adjust the supply to meet an increasing price peg, our community will be subjected to a mathematically guaranteed reward system alongside exciting contests, incentive-based reward programs and a myriad of opportunities to earn more through a variety of posts and positions that will help support the overall community goals.

Transparency

Talking about transparency, it is not easy to explain how care about and our pledge to transparency, defines how we operate as both a team and an overall community. We will be trying to be transparent as much as possible to make this SAITAMA project successful. There are many moving pieces that all must come together to create a successful BSC token with such an ecosystem, and our community is ensured that they will have full access to and understanding of all aspects of our team. And this is how our team make benefit from the support of our community and gain insights from community suggestions. For us, that our community is not just investors, but also passionate and talented traders, marketers, and innovators, and we strive to maximize their talents and resources to further the success and potential of our project.

Innovation

Innovation is one of the most common thing out there. Why ? Because they are tons of project actually like ours bur our pledge also defines what truly sets SAITAMA INU BEP20 apart from every other current project and that is our pledge to innovation. First, our tokenomics, customized DApp and overall ecosystem which will revolutionize the landscape of BSC token economics define what we're doing. This exciting new utility is just the first step in our drive to provide the SAITAMA INU community with the most innovative and rewarding utilities as we work together to maximize investor returns and community growth. Investors are today confusing by meme coins and the real truth they need is innovation, talent, utility, and transparency. We made that easy and our community will lead the next generation of innovative, utility-based project that will maximize community support and resources and continually evolve and add to our growing utility and marketing functions.

ECOSYSTEM

Our project is fully decentralized and community-focused. The fees go from 5% from the 115% tax on every transaction and is taken and re-distributed to all token holders in SAITAMA. Each transaction will automatically add liquidity to the Pancake swap pool. SAITAMA rewards investors just for holding its token, and the amount of reward earned increases the longer an investor holds the token. That is not all, token holders are also rewarded for the success of the project, which comes with an increased volume of transactions.

Each time liquidity is deposited in a pool, special tokens called liquidity tokens are issued to the source address, and they are directly proportional to the amount of liquidity that is added to the pool. Each time a transaction takes place, the fee that is charged is distributed proportionally to all LPs (liquidity providers) in the pool at that given time of the trade. To collect the basic liquidity, plus the charges accumulated during the time their liquidity was locked. The token placed into a liquidity pool is referred to as a value or a derivative. This way, the supplier takes ownership rights of the reward paid on the total amount supplied. SAITAMA INU was launched with an initial supply of liquidity in the form of BNB/SAITAMA LP Tokens. This is done to make investors content that the project team is committed to the success of the project with zero malicious intent or rug pull intent.

OUR TOKEN DYNAMICS

SAITAMA is an BEP20 token that was launched on the Binance Smart Chain network on 1st November 2021. 5% redistribution + 2% burn on every transaction.
